

The Busy Genie has partnered up with [Shirley's Abacus School](#) based in Richmond Hill, Ontario to bring you ABACUS!

ABACUS MATH

The Most Effective Way to Learn Math!

Register today! Low teacher-student ratio!

Ongoing registrations year-round!

COME AND OBSERVE A CLASS!

CALL AHEAD TO BOOK THE TIME: 416-236-5437

EMAIL: INFO@THEBUSYGENIE.COM

FEES & REGISTRATION AVAILABLE AT THE BUSY GENIE RECEPTION

CURRENT CLASS SCHEDULE: THURSDAYS, 4:30 PM – 6:00 PM

Abacus is considered the most effective way to initiate math for young children and sharpen math skills for everyone in the 21st century. Learning abacus provides stimulations that are socially responsive and intellectually congruent for the growth of brain cells. It is encouraged that kids start with the Abacus Math program as early as possible, once they can count from 0 to 10. Relatively older kids can jump start math levels after completing the first stage lessons. No matter what age start, they will have lifelong benefits.

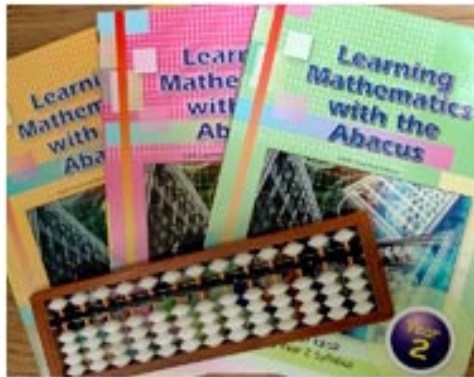

Why is the Abacus Math program so beneficial?

Promotes Multisensory Integration

Children between 4 and 12 retain a large 'plasticity' in their brains which shape according to environmental stimuli. Multisensory teaching is the use of all senses when teaching so that the different channels will support each other in learning. In an abacus math class, the pupil uses the visual channel (eyes), the auditory channel (ears) and kinesthetic (motor memory), and tactile (hands) to learn. Therefore, abacus math effectively motivates IQ effects through multisensory techniques. Multisensory techniques are also believed to be effective for students with learning disabilities.

Improves Academic Performance

- Establishes numeric relations in a clear and logical way for small children
- Enables the child to respond to questions promptly
- Elevates memory & attention span
- Encourages the child to dedicate full attention to study by listening more attentively and effectively
- Complements and supplements the arithmetic approaches adopted in schools
- Helps students overcome the fears of mathematics, if any, and gain confidence
- Makes the learner more confident and interested in school works, both curricular and extracurricular.

Abacus Math at The Busy Genie

The Math program is designed and practiced to perform arithmetic calculations without the aid of external computing tools. Many people use mental math every day without even realizing it. Calculating a tip, determining when to apply your brakes so you will not hit the car in front of you, and figuring out if you have enough time to finish all your errands while on your lunch break are all examples of using mental math. This mental math practices not only helps in brain development but also improves visualization and listening skills in children. As a result, there is complete coordination of the brain - vision and hearing.

What will you learn from our program? You will learn to do math in your head faster than you ever thought possible. After you take our program, you will dramatically improve your memory for numbers. It will improve your performance at your school too. Children will also learn to view math as an activity that can actually be fun.
